

HP Everyday Blockout Display Film

The HP large format printing system—the complete solution

HP large format printers, Original HP inks and printheads, and Original HP printing materials are designed to work together as a system to provide reliable, consistent results with every print.

Economical display film compatible with both HP DesignJet and HP Latex ink technologies

Experience a heavyweight film at an economical price

The innovative three-layer construction with polyester and polypropylene produces rigid, durable displays with excellent lay-flat properties. This economical display film is designed to be offered at a lower price than 100% polyester film.

Enjoy dual ink compatibility and environmental reassurance

The coating enables durable prints that dry quickly and is compatible with both HP DesignJet inks and HP Latex Inks. HP Everyday Blockout Display Film is designed with the environment in mind and is REACH compliant¹—a regulation of the European Union adopted to improve the protection of human health and the environment.

Create beautiful, opaque display graphics

HP Everyday Blockout Display Film is a 9.8-mil composite polymeric display film with a light-blocking opaque layer that prevents show-through so viewers see clean, crisp images.

¹ This product does not contain substances listed as SVHC (155) per Annex XIV of the EU REACH directive published as of June 16, 2014 in concentrations exceeding 0.1%. To determine the status of SVHC in HP products, see the HP REACH Article 33 declaration published at [HP Printing Products and Consumable Supplies](#). Warranty	HP large format printing materials are free from defects in materials and workmanship. For warranty statement, please see HPLFMedia.com/hp/MediaWarranties . To obtain warranty service, please contact BMG customer support at HPLFMedia.com/hp/en/contactus .			

² Based on testing HP media printed with Original HP inks using a 3-mil vinyl film laminate that contains a water-based acrylic pressure-sensitive adhesive and a 3-mil vinyl film laminate that contains a solvent acrylic pressure-sensitive adhesive—the formulations of which HP believes represent the majority of cold film laminates that are commercially available based on historical testing. Films without the above-mentioned formulations may not be compatible.
