

LexJet 8 Mil Production Satin Photo Paper

LexJet's next-generation 8 Mil Production Satin Photo Paper features an instant-dry, microporous inkjet coating that is ideal for faster-turnaround, higher-volume photo printing on a variety of makes and models of aqueous inkjet printers. Because the prints dry so quickly, they resist smudges and fingerprints during handling and don't require a lot of extra drying time before laminating. The latest version of 8 Mil Production Satin Photo Paper features an improved white point for greater contrast and a wider color gamut. This paper can be used with either pressure-sensitive or low-heat thermal laminating films.

This photo paper provides the same great versatility as LexJet's 8 Mil ImagePro photo paper at a price point that makes higher production runs more affordable.

The satin finish provides a more natural look to images that feature facial close-ups and minimizes the risk of glare on prints that will be displayed under bright lights.

LexJet 8 Mil Production Satin Photo Paper can be used on all types of aqueous inkjet printers, whether they use dye or pigment inks or thermal or piezo printheads, and is engineered for the latest inksets, including Canon Lucia, Epson UltraChrome K3 HDR and HP Viverra.

Features	Strengths	Applications
Universally compatible with all dye and pigment inks.	Instant Dry	High-volume photo printing
Cost effective.	Resistant to smudging and fingerprints	
Improved inkjet coating and white point.	Greater contrast and a wider color gamut.	
Satin Finish	More natural look to images, and reduces glare.	

Property	Description
Core Size	2in Core
Material	Resin-coated (RC) photo paper
Gauge	8 Mil
Basis Weight	190g
Whiteness	100 CIE
Opacity	> 89
Gloss Level @ 60°	17% +/- 5
Surface Finish	Satin Photo Finish
Printer/Ink Compatibility	Compatible with all thermal and piezo inkjet printers using water-based dye and pigment-based inks.

LexJet 8 Mil Production Satin Photo Paper

Property	Description
Imaging Side	Material is packaged with printable side facing up. Printable surface can be identified by a slight tackiness.
Finishing/Post Processing	Pressure-sensitive vinyl laminates, like LexJet's GraphicsGuard with UV inhibitors, can be applied to increase the fade and abrasion resistance of the image. Before applying the laminate, allow the image to dry for 24 hours.
Light Fastness	The fading time of inkjet ink is a direct result of the inks that you choose to use and the environment where the print is displayed. Contact the ink manufacturer for light-fastness data.
Optimal Print Environment	70° F (21° C), 50% R.H
Optimal Service Environment	For printing: 60° - 80° F, 50% Relative Humidity.
Handling Recommendations	Due to the absorptive nature of the coating, you should avoid touching the coated surface. It's always recommended that cotton gloves be used when handling inkjet coated materials. Rolls of LexJet film are supplied with the coated side facing out.
Service Temp. Range	-40° - 176° F (-40° C to 80° C).
Software Settings	The coating on this product is engineered for better than 300% ink coverage. A photo luster, satin or semi-gloss setting is the recommended starting point. However, we recommend a custom ICC profile for optimal results. Please refer to www.lexjet.com for starting-point ICC profiles for some printers.
Ideal Storage Conditions	70° F (21° C), 50% R.H. (a controlled environment is recommended); store in original packaging.
Shelf Life	1 year from the LexJet ship date when stored in proper conditions.
